PREFACE

This Mission Coverage Index (MCI) furnishes a listing of intelligence targets covered by Mission 9041. Items in the listing are arranged (1) by country, (2) by WAC area within the country, and (3) by coordinates reading from south to north and from west to east. An explanation of column headings and photo reference data used in presenting the information is contained in the appendix. The distances of targets from urban areas given in this report have been rounded off to the nearest nautical mile (nm) and are referenced from the approximate center of the urban area to the approximate center of the target.

For the convenience of the user, a subject index to the intelligence targets has been included following the listing. Targets in the subject index are listed (1) by category, (2) by country within each category, and (3) alphabetically by place name within each country.

The user of this MCI is cautioned that the scan of photography from Mission 9040 was accomplished in a relatively short time and often without the aid of precise analytical and mensural equipment commonly employed in detailed photographic analysis. Consequently, although the information presented herein is essentially accurate, future detailed analysis may somewhat alter portions of the information.

SUMMARY

Mission 9041, accomplished between 2 August and 6 August 1962, provided 40 photographic passes over the Soviet Union, China, and European Satellites. Utilization of a forward and aft camera provided stereoscopic coverage. Approximately 48 percent of the coverage was cloud free.

There were several malfunctions in the accomplishment of this mission which place certain restrictions on its use. Corona static discharge within the cameras caused fogging of the film over small portions of some of the frames. Where this has occurred the term "fogged" has been used as a limiting factor in this publication. In one pass, Pass A2, the vehicle turned diagonally to the direction of flight, which caused blurring of the images, called "poor image quality" in this publication. Several passes covered targets during the twilight period; the consequent lack of light and presence of long shadows resulted in poor definition of these targets. The term "identification only" was used as a limiting factor for these targets.

The average scale of the photography at the center of the format ranges from approximately 1:425,000 at 80 degrees north to 1:341,000 at 20 degrees north for the descending north-to-south passes, and 1:457,000 at 80 degrees north to 1:620,000 at 20 degrees north for the ascending south-to-north passes.

Installations of special interest identified for the first time on []
photography include 9 SA-2 SAM sites. A SAM support facility was identified at
Petrozavodsk. Three minor airfields were also covered for the first time:
Khara-tas (65-40N 135-20E), Minsk Area (53-55N 027-42E), and Asykay Area
(62-49N 136-51E). A new secured area was observed at Baranovichi Airfield,
and new features were observed at []

APPENDIX
EXPLANATION OF COLUMN HEADINGS
AND PHOTO REFERENCES

City, Installation -- This column contains the name of the city or town nearest the installation, followed by the name of the installation. If the name of the installation is not known, it is titled according to its function. The city and installation names are followed by a capsule description, where appropriate.

Coordinates -- Coordinates are referenced to the SW corner of the minute square. When the subject installation covers a wide area, coordinates are given for the approximate center of the installation.

WAC -- This column provides the World Aeronautical Chart number for the area in which the subject installation lies.

Installation Numbers -- The Installation Numbers column is divided into two subcolumns. The first subcolumn lists, when known, the BE installation number assigned to the target. The second subcolumn lists the installation number assigned by NPIC. Installation numbers, when used to reference an item, should be prefixed by the appropriate WAC number, since installation numbers are repeated from WAC to WAC. For example, there is an NPIC target numbered 0235-1 and an NPIC target numbered 0236-1. In each instance, the NPIC installation number is 1, but the installations appear on different WACs.

The photo reference indicated frame(s) on which the target appears, and conditions which affect interpretation of the target.
